

Integrating air quality (AQ) and climate change (CC) strategies in Oman

JIHAD JABR ALBUSAIDI

10TH, JANUARY 2022

Is air pollution a problem in Oman?

WE DON'T DO MONITORING,
SO DO WE KNOW?

Times of Oman: Sandstorm in Nimr, 3 Aug. 2016

Is climate change a problem in Oman?

I HAD NO IDEA TILL I
CONDUCTED THIS STUDY

1. What is the current situation in terms of emissions trends and policies relating to Air Pollution (AP), Climate Change (CC) in Oman?
-
2. How will the situation develop if nothing is done to address the problem (baseline scenario)?
 3. What are the possible mitigation measures, and their likely benefits (mitigation scenarios)?
 4. What are the current and future impacts (effects) of AP/CC in Oman?
 5. What are the policies that could help address the problem?

Estimating current and historic emissions in Oman

CO₂, CO, CH₄, NMVOC, NO_x, SO₂, PM_{2.5}, BC, OC, AND NH₃

WHERE IS OMAN HEADING?

Sources of CO2 emission in Oman for 2010

Sources of SLCP emission in Oman for 2010

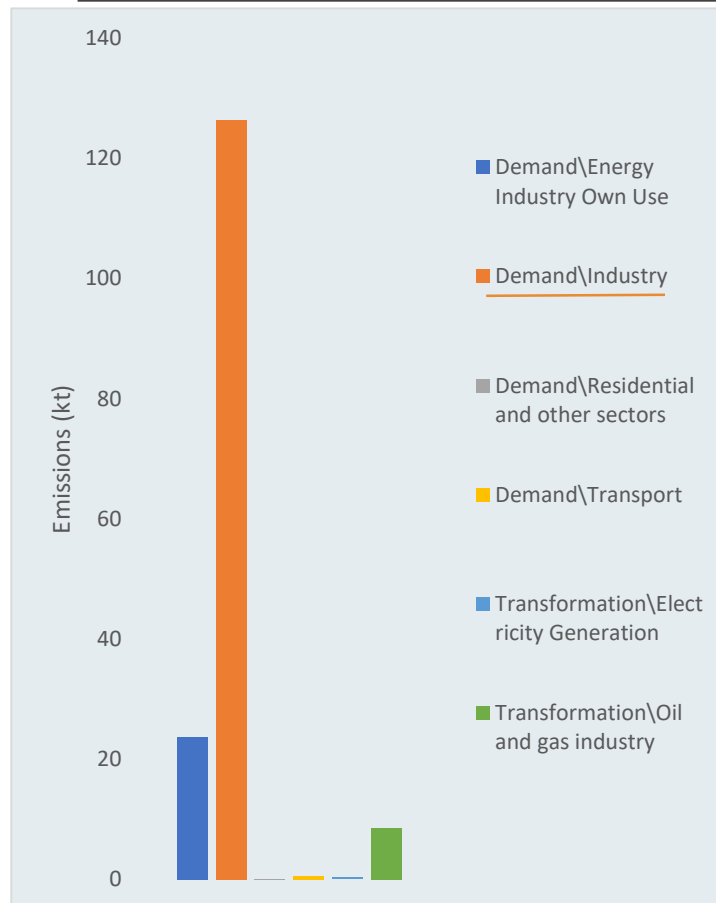

Sources of CH₄ emission in Oman for 2010

Sources of BC emission in Oman for 2010

Sources of SO₂ emission in Oman for 2010

Sources of NO_x emission in Oman for 2010

Sources of PM_{2.5} emission in Oman for 2010

Sources of NH₃ emission in Oman for 2010

Sources of OC emission in Oman for 2010

Sources of NMVOCs emission in Oman for 2010

Sources of CO emission in Oman for 2010

if we don't do anything, the
chance to get worse is high

BASELINE SCENARIOS (BAU)

Baseline scenario emissions estimate from 2010 to 2050

Total pollutant emissions in kt for Oman for the BAU scenario

Effects	2010	2020	2030	2040	2050
CO ₂	49,948	88,777	140,399	215,334	314,867
CH ₄	564.8	687.5	743.9	945.0	1,248.7
SO ₂	159.6	222.9	435.9	740.2	1,255.4
NM VOC	142.1	172.6	206.1	267.9	323.7
NO _x	136.9	156.3	247.2	419.7	705.3
PM _{2.5}	60.8	138.2	215.6	300.5	309.3
CO	50.8	69.1	99.5	153.9	201.0
NH ₃	17.8	20.3	23.4	28.1	34.0
BC	3.9	4.9	5.6	7.5	10.7
OC	0.9	1.1	1.6	2.8	4.6

How important is climate change for Oman?

SHOULD WE BE WORRIED ABOUT CLIMATE CHANGE?

1. Heat waves:

A city in Oman may have just had the hottest night ever recorded on Earth

Doyle Rice | USA TODAY

Published 12:07 p.m. UTC Jun 29, 2018

In this Feb. 17, 2018 photo, three camels graze on beach shrubs along the al-Maghsail beach, near Salalah, in southern Oman. A city in Oman may have set the all-time world record for hottest nighttime low temperature this week.

Subject: If you think it is hot here think of Oman!
To: SEI York <sei-york-group@york.ac.uk>

Hi all,

Just digested Jihad's excellent brown bag talk (as I missed it I asked for the slides) and looked up her country ... to my sheer horror I stumbled across this temperature fact far beyond my imagination:

CNN: "The city of Quriyat in Oman now has a dubious distinction to its name: It has recorded the highest "low" temperature in known history.

The Middle Eastern town of about 50,000 residents clocked in at a **low** temperature of **42.6°C** (108.7°F) on June 26, 2018."

So, if you think it is hot here think again!
Andreas

OMAN 2040 VISION

Statement of the Council of Ministers

Climate change Impacts

مجلس الوزراء

بيان

جلسة الثلاثاء - ٢٩ مايو ٢٠١٨

- استعرض مجلس الوزراء جهود الحكومة للتعامل مع آثار التغير المناخي الأخير الذي شهدته كل من محافظتي ظفار والوسطى.
- المجلس يعرب عن الشكر والثناء لكافة الجهات ويخص بالذكر منتسبي كل من وزارة الدفاع وقوات السلطان المسلحة والحرس السلطاني العُماني وشرطة عُمان السلطانية والأجهزة الأمنية واللجنة الوطنية للدفاع المدني والأرصاد الجوية والأجهزة الإعلامية وخاصة الهيئة العامة للإذاعة والتلفزيون
- المجلس يشيد بجهود الشباب المتواصلة من تقديم الإرشادات والتوعية بطبيعة مجريات الحالة المناخية.
- المجلس يؤكد ان كافة الوزارات والوحدات المعنية قامت بدور هام لمعالجة عدد من الآثار التي تعرضت لها بعض المرافق والاستمرار تدريجيا في استئناف التشغيل لخدماتها.
- إشادة بإسهامات محافظتي ظفار والوسطى وكافة الولاية والقطاع الخاص والهيئة العُمانية للأعمال الخيرية بعباء وافر وشعور بالمسؤولية الوطنية في التعامل مع تطورات الحالة الإدارية.
- مجلس الوزراء يتقدم بالتعازي والمواساة لأسر المتوفين إثر الظروف المناخية داخل السلطنة وفي دول الجوار الشقيقة، داعيا المولى عز وجل بالسلامة للجميع.

Oman 2040 vision

Environment and Natural Resources

A Society of Creative Individuals

Proud of their identity, innovative, globally competitive, leading a decent life and enjoying sustained well-being

An Environment with Sustainable Components

Safe and well-preserved environment, with effective and balanced ecosystems and renewable resources

A Competitive Economy

Productive and diversified; based on innovation, integration of roles and equal opportunities; driven by the private sector, and achieving comprehensive and sustainable development

Responsible State Agencies

With comprehensive governance, effective oversight, swift justice system, and efficient performance

An Environment with Sustainable Components Safe and well-preserved environment, with effective and balanced ecosystems and renewable resources

We can do better

MITIGATION SCENARIOS

Sector		Scenario	Abbreviation
	1	Business - as - Usual	BAU
Oil and gas	2	Fugitive Reduction Scenario	FRS
	3	Zero Flaring Scenario	ZFS
Electricity generation	4	Renewable Energy Scenario	RES
	5	Zero Coal Scenario	ZCS
Manufacturing industry	6	Efficient Industry Scenario	EIS
	7	Clean Fuel Scenario	CFS
Transport	8	Electric Vehicle Scenario	EVS
	9	Public Transport Scenario	PTS
	10	Paved Road Scenario	PRS
Residential	11	Efficient Air Conditioning Scenario	REACS
Commercial and Public services	12	Efficient Air Conditioning Scenario	CEACS
(2-12) All measures combined			AM

Oil and gas industry mitigation scenario:

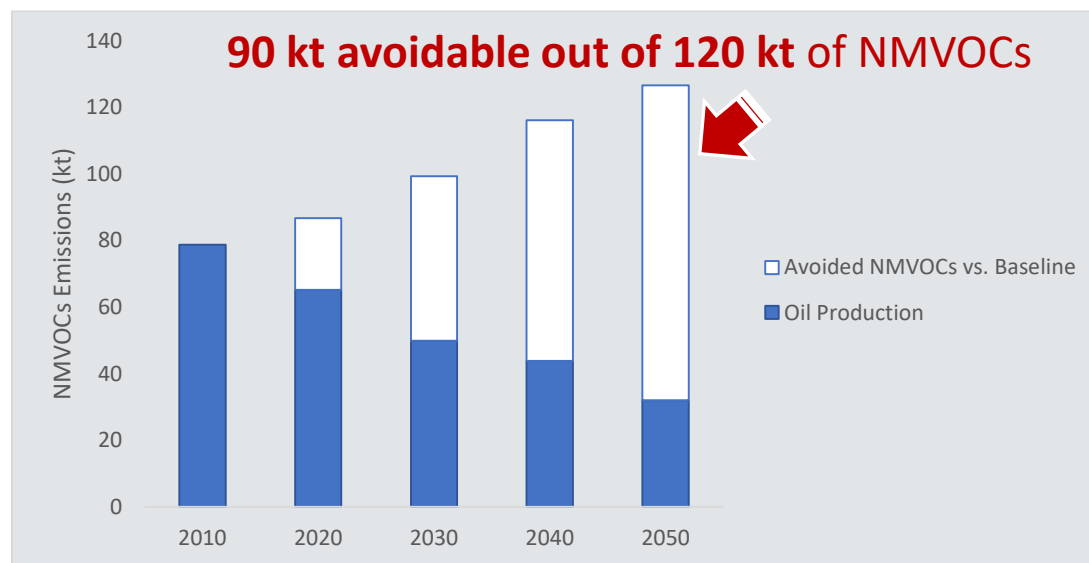

FUGITIVE REDUCTION SCENARIO (FRS)

ZERO FLARING SCENARIO (ZFS)

	(BAU)	Measure of mitigation scenario
Fugitive Reduction Scenario (FRS)	no activity data required, as the projection is driven by the growth in the demand for oil and gas	<p>Extended recovery and use—rather than venting—of associated gas, and improved control of unintended fugitive emissions from oil production.</p> <p>Reduced gas leakage from long-distance transmission pipelines. Avoid fugitive emission by advanced technology.</p> <p>Emissions control of venting and flaring of CH₄, NMVOCs, and CO₂ as follows: (2030,50,2050,75)</p>
Zero Flaring Scenario (ZFS)	Based on actual historical data of volume of gas flared from oil and gas industry as illustrated before in table 4.10b	<p>Elimination of flaring by 2030 based on Zero flaring initiative from oil and gas production;</p> <p>Methane flaring: (2030,0)</p> <p>NMVOCS flaring: (2030,0)</p> <p>And from the refineries;</p> <p>Flaring: (2030,0)</p> 

Fugitive reduction scenario in oil and gas sector

Zero flaring scenario in oil and gas sector

Comparison of NMVOCs emissions projection 2010 – 2050 for the **fugitive reduction scenario**, **zero flaring scenario**, **business as usual scenario** and the **All Measures** scenario for the oil and gas sector

Electricity generation mitigation scenario:

RENEWABLE ENERGY SCENARIO (RES)

ZERO COAL SCENARIO (ZCS)

	(BAU)	Measure of mitigation scenario
Renewable Energy Scenario (RES)	<p>OPWP plans to develop 2,600 MW of installed capacity of renewable energy (RE) projects by 2024, or renewable energy will generate at least 10% of electrical energy by 2025*.</p> <p>Coal:(7% in 2024, 50% in 2030) Diesel:(3% in 2016)</p>	<p>More ambitious vision for using renewables, going far beyond the government vision, as follows:</p> <p>Solar:(40% in 2030, 50% in 2050) Wind:(10% in 2030, 20% in 2050) NG:(50% in 2030, 30% in 2050) Diesel: (0%)</p>
Zero Coal Scenario (ZCS)	<p>Coal will be utilized to fuel up to 3,000 MW of generation capacity by 2030*</p>	<p>Coal: (0%) Diesel: (3% in 2016) NG: (97% in 2016)</p> 

Renewable energy scenario in electricity generation sector

Zero coal scenario in electricity generation sector

Manufacturing industry mitigation scenario:

EFFICIENT INDUSTRY SCENARIO (EIS)

CLEAN FUEL SCENARIO (CFS)

	(BAU)	Measure of mitigation scenario
Efficient Industry Scenario (EIS)	No change in energy intensity	To reduce growth of the final energy intensity in the industry sector to (0%, 2018) and, (-2.0/100)
Clean Fuel Scenario (CFS)	<p>The percentage share of fuel in the manufacturing industry is:</p> <p>HFO: 78%</p> <p>NG: 16%</p> <p>Electricity: 6%</p>	<p>To shift from using HFO in the industry to cleaner fuel as a preventive action to reduce pollution as follows:</p> <p>HFO: (2050, 0%)</p> <p>NG: (2050, 50%)</p> <p>Electricity: (2050, 50%)</p> 

Efficient industry scenario

in manufacturing industry sector

Clean fuel scenario

in manufacturing industry sector

Transport mitigation scenario:

ELECTRIC VEHICLE SCENARIO (EVS)

PUBLIC TRANSPORT SCENARIO (PTS)

PAVED ROAD SCENARIO (PRS)

	(BAU)	Measure of mitigation scenario
Electric Vehicles Scenario (EVS)	Gasoline and diesel vehicles are projected based on the stock turnover model described in section 4.2.1.2	<p><u>penetration of electric vehicles:</u></p> <ul style="list-style-type: none"> ★ Passenger cars: (20% in 2030, 80% in 2050) ★ Light commercial vehicles (20% in 2030, 80% in 2050) ★ Heavy duty vehicles (10% in 2030, 30% in 2050) ★ Motorbikes (50% in 2030, 100% in 2050) ★ Urban buses (50% in 2030, 100% in 2050)
Public Transport Scenario (PTS)		<p>Improving the public transport system, and adding trams. The assumption here is <u>reduction by 20% in 2030 and by 40% in 2050 in passenger cars km travelled</u>. This would reduce the number of vehicle users, and the money used in other forms of private transportation. It will also reduce road traffic accidents in</p>
Paved Road Scenario (PRS)		<p>Oman, and reduce demand for petrol and diesel</p> <p>Unpaved roads play a major role in the emission of PM_{2.5}, so having more paved roads will help to reduce PM_{2.5}: <u>By 2030, 30% of unpaved roads will be paved, and by 2050, 70% of unpaved roads will be paved.</u></p>

Electric vehicles scenario in road transport sector

Public Transport Scenario in road transport sector

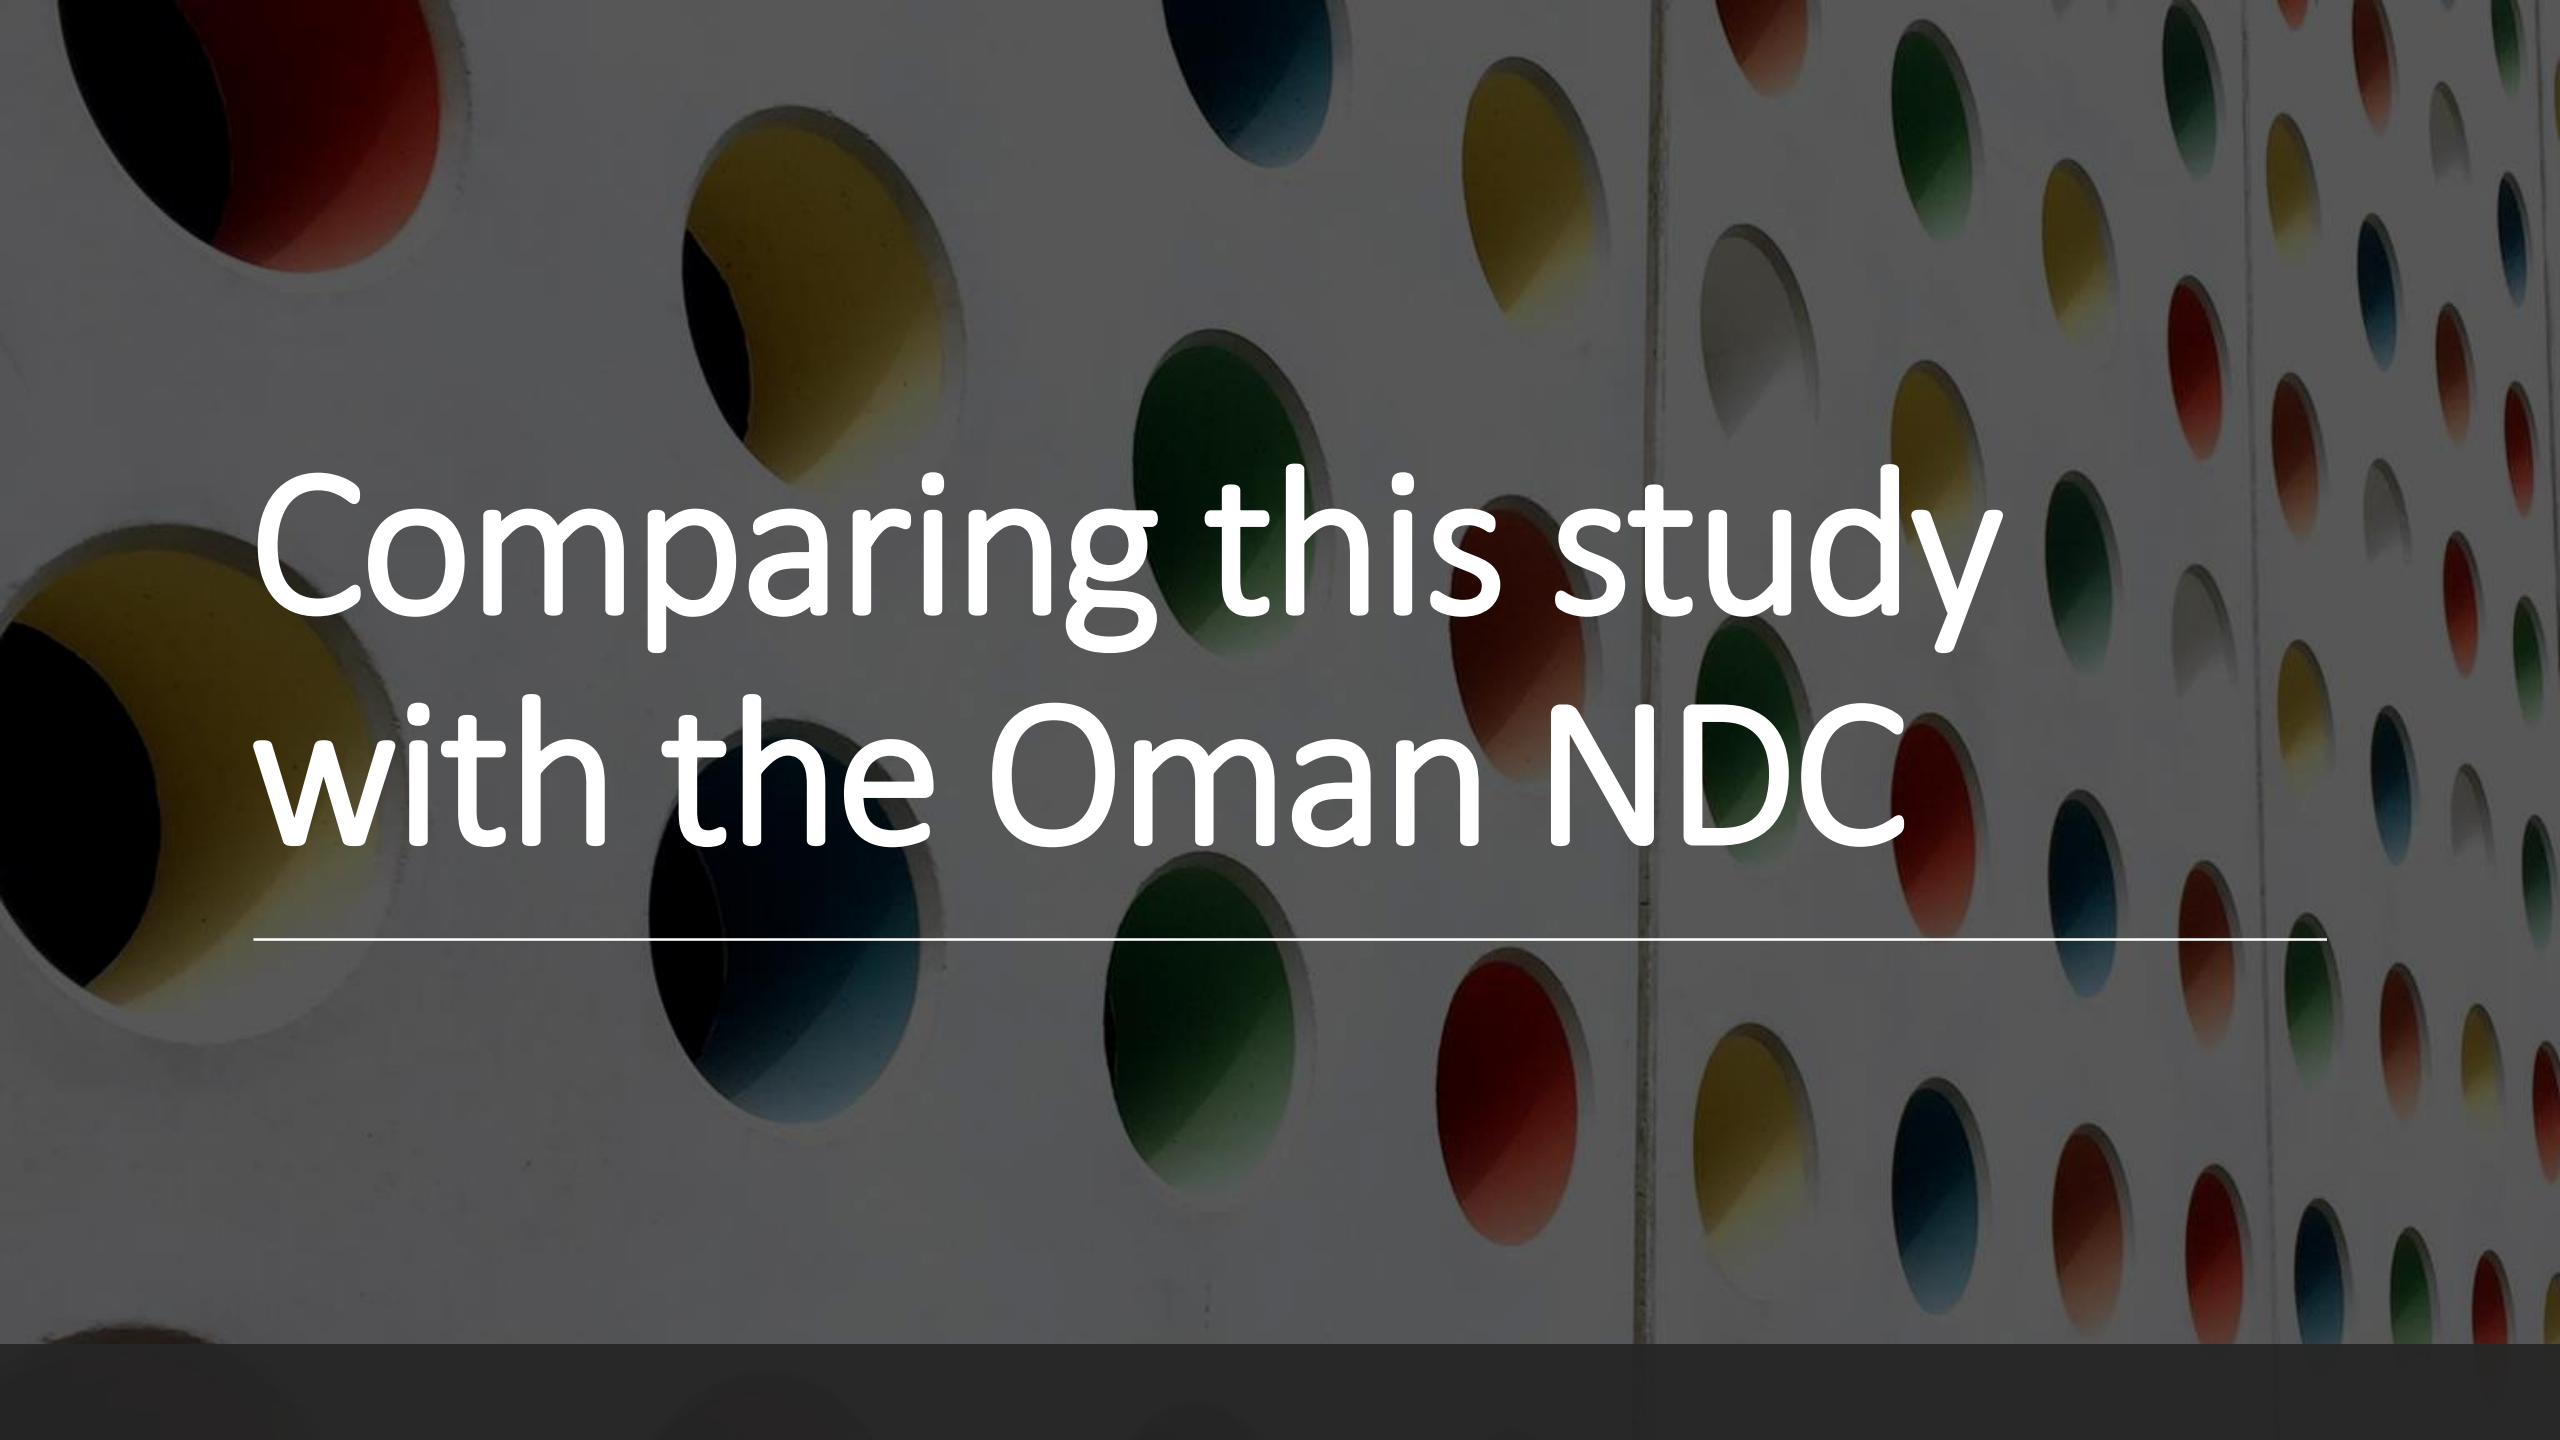

Paved Road Scenario in road transport sector

Comparison of PM_{2.5} emissions projection 2010 – 2040 for the **electric vehicles scenario**, **paved road scenario**, **public transport scenario**, **business as usual scenario** and the **All Measures** scenario for the transport sector

The background of the slide features a white grid with numerous circular holes. Each hole is filled with a different color, including red, yellow, green, blue, and black, creating a vibrant, multi-colored pattern.

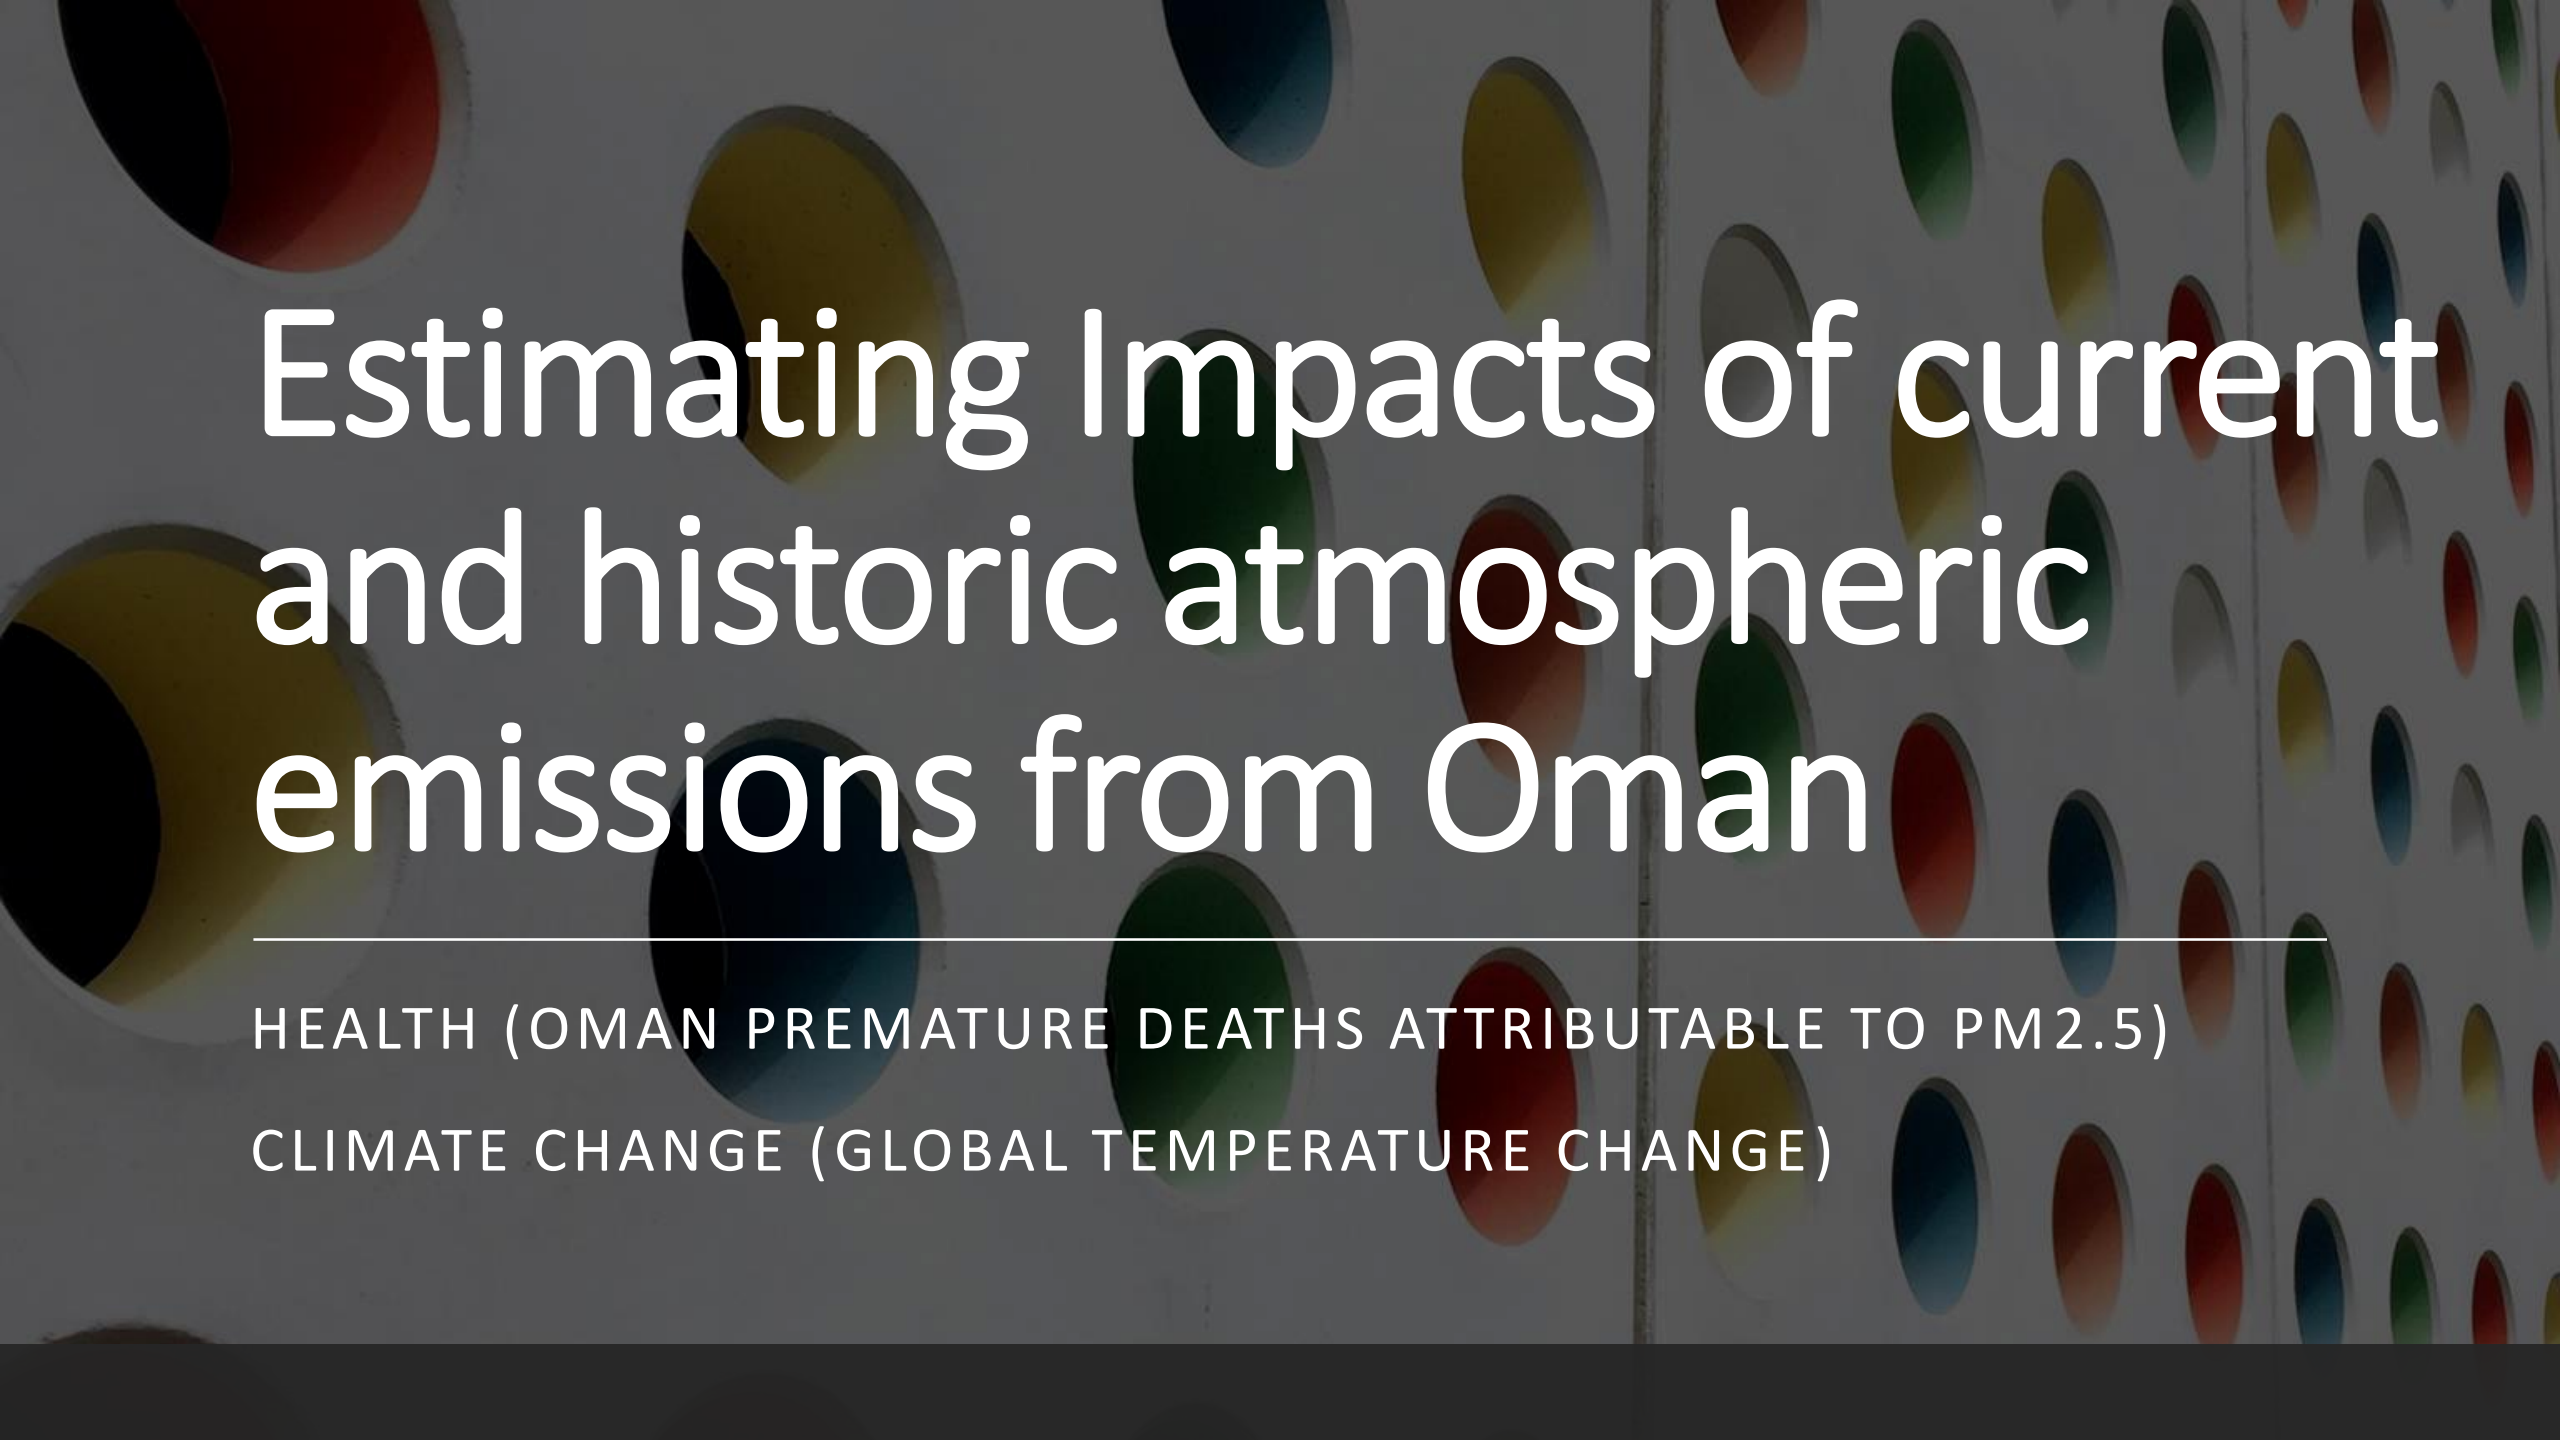

Comparing this study with the Oman NDC

Oman GHGs emission projection as business as usual scenario and mitigation scenario, 1994 has been considered for the GHG growth projections

Oman CO₂ equivalent projection as BAU scenario and mitigation scenario (all measures)
which revealed from this study

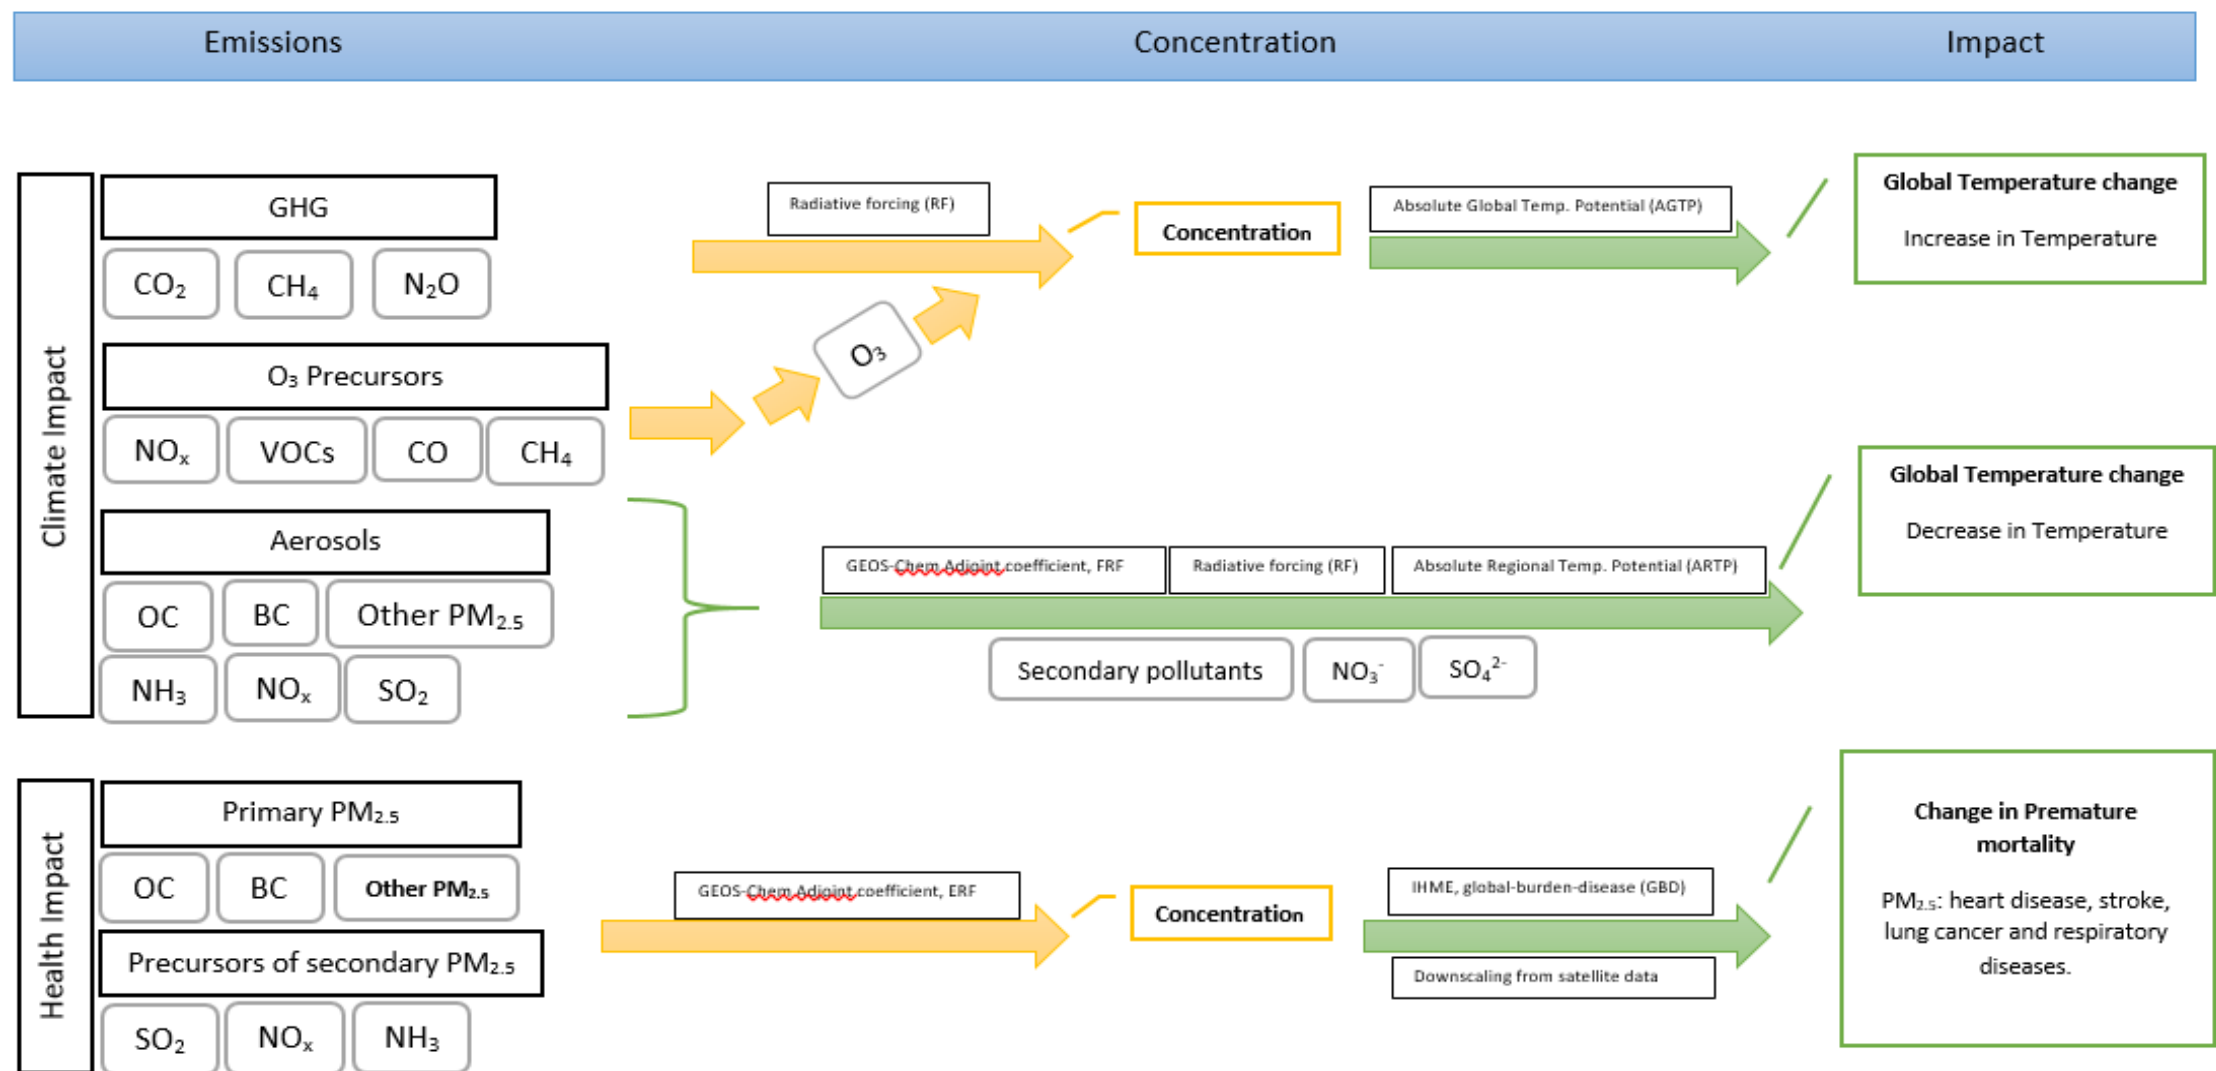

Estimating Impacts of current and historic atmospheric emissions from Oman

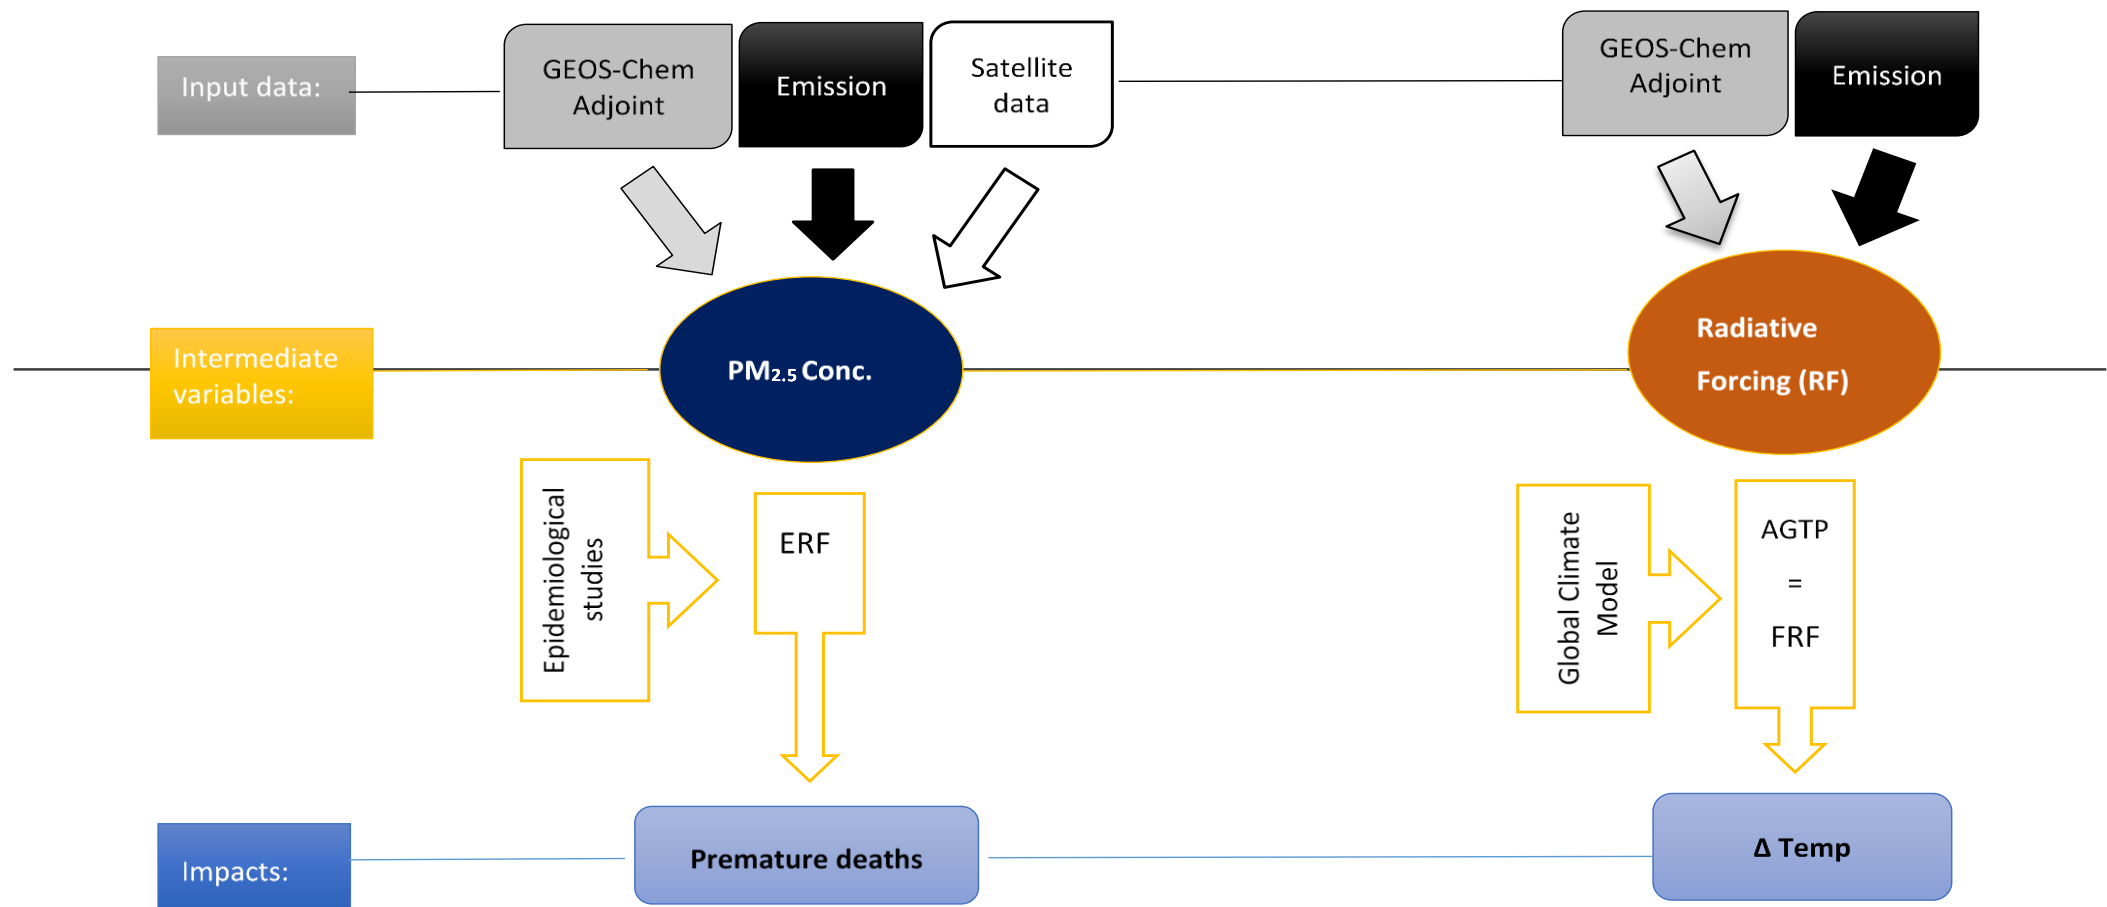

HEALTH (OMAN PREMATURE DEATHS ATTRIBUTABLE TO PM_{2.5})

CLIMATE CHANGE (GLOBAL TEMPERATURE CHANGE)

Method of estimating the impacts on climate and health from different pollutants,

FRF and ERF is Forcing Response Function and Exposure Response Function respectively

How LEAP convert emission into **health and climate impact**

Oman
premature
deaths

attributable
to PM2.5

Premature deaths in 2010

attributed to PM2.5 based on age group and cause of death, and projection for 2030 and 2050 as BAU scenario

711 cases of premature death in Oman attributed to PM2.5 in 2010; this figure would rise to 1810 cases in 2030, and to more than 4400 cases in 2050, according to the BAU scenario

All measures Avoided vs. BAU scenario for the premature deaths attributed to PM2.5

All measures Avoided vs. BAU scenario for the premature deaths attributed to PM2.5 (national and rest of the world)

Global Temperature Change

Avoided vs. baseline global temperature change projection (2020-2050) for different sector scenarios

Comparison of the effects of baseline scenario and all measures scenario in global temperature change due to Oman emissions

Conclusion

INTEGRATING AQ &
CC STRATEGIES

Total emissions
 AQ & CC in Oman
 2010, 2050 (BAU),
 and avoided
 emissions if all
 measures were to
 be implemented

Pollutants	main sources	Total emissions (2010) kt	Total emissions (2050) kt	Avoided emissions (2050) kt	
SO ₂	Manufacturing industry	160	1,255	144	← 11%
NMVOCs	Oil and gas industry	142	324	92	← 28%
NO _x	Transport, Manufacturing industry, and Electricity generation	137	705	211	← 30%
PM _{2.5}	Road transport	61	309	34	← 11%
CO	Road transport	51	201	81	← 40%
NH ₃	Agriculture	18	34	3	
OC	Residential, and Industry	0.9	5	-	
pollutants	main sources	Total emissions (2010) kt	Total emissions (2050) kt	Avoided emissions (2050) kt	
CO ₂	Electricity generation, Road transport, and Manufacturing industry	50,000	314,867	191,000	← 61%
CH ₄	Oil and gas industry	565	1,249	840	← 67%
BC	Manufacturing industry, Oil and gas industry, Residential, and Road transport	4	11	-	

The avoided change in global temperature against the avoided premature mortality for 2020-2050 for the different scenarios

‘low hanging fruit’ ★
RES and EVS represents the most beneficial scenarios in terms of both the avoided temperature change and avoided premature deaths

Thank you
